VSL focuses on structured credit investing with an aim to protect downside volatility while providing attractive returns to investors

Structuring Expertise

- Focuses on **secured lending with significant structural protection** to minimise performance volatility and align incentives with management and equity holders of the portfolio companies

Strong Collateral Protection

- Primarily lends against **short duration, cash generating collateral assets** which can be quickly turned to cash in order to repay the Company's investment in an adverse outcome
- These assets have predictable cash flows that can be readily liquidated in either a benign or stressed macroeconomic environment

Proprietary Global Sourcing

- VPC has found significant opportunity to earn attractive risk-adjusted returns through its extensive sourcing relationships around the globe, largely focusing on **emerging sectors of the digital economy** where pricing margins have not yet compressed but risk can be properly underwritten

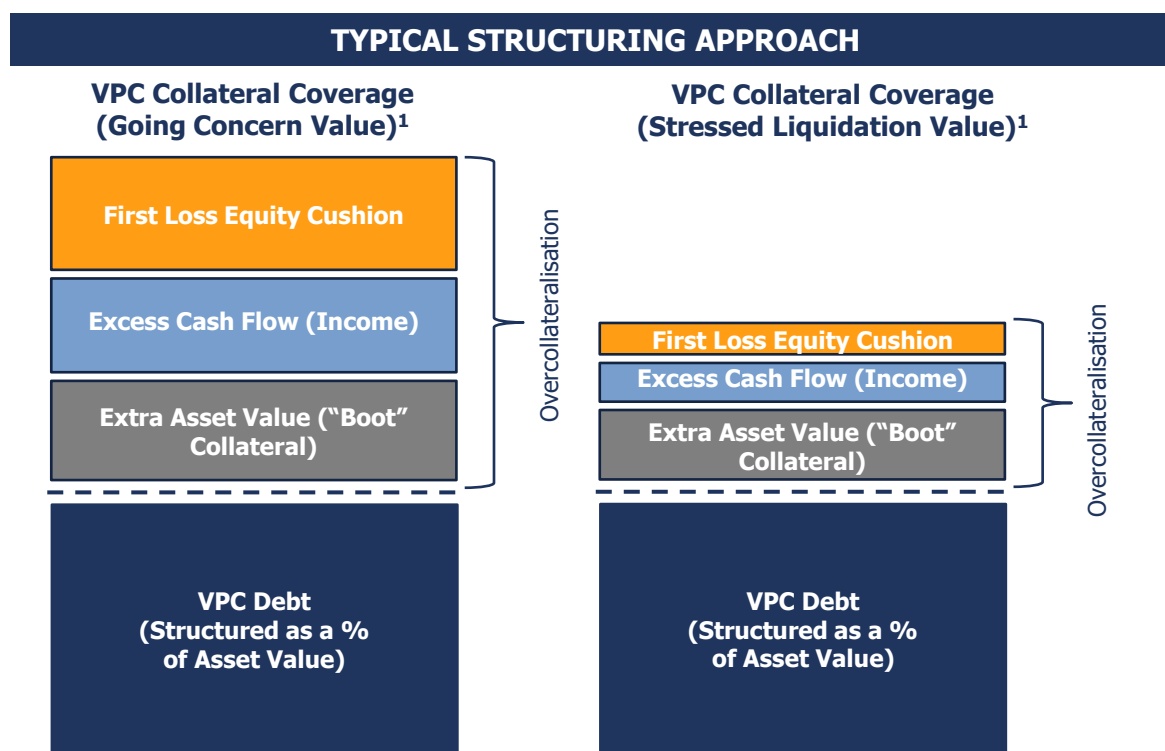

Active Risk Management

- Investment monitoring includes comprehensive reporting and analytics, as well as recurring facility audits and frequent touch points with management

Structuring Approach

VSL focuses on lending against liquidation value of collateral and structures investments to be resilient to significant stress

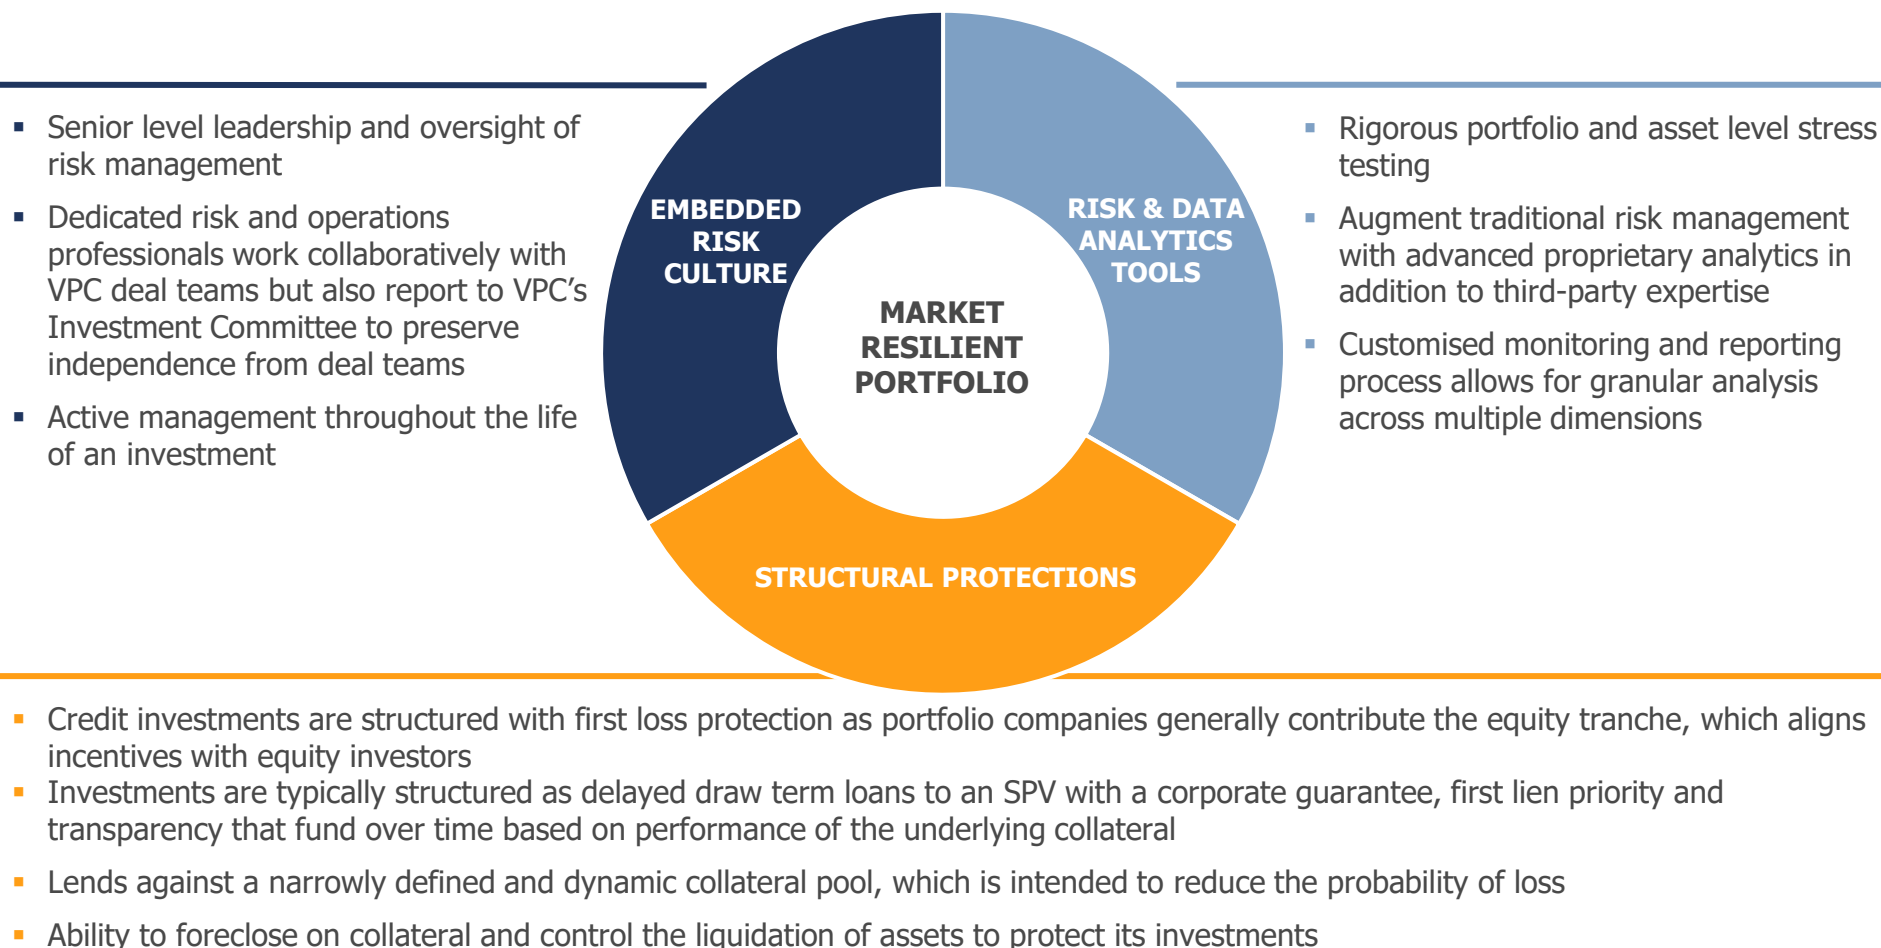

- Investments are typically structured with significant overcollateralisation and credit enhancement to minimise any loss given default in a scenario where VSL must foreclose on collateral to repay its investment
- Overcollateralisation is sized to withstand significant stress to liquidation values without impacting VSL's investment outcome
- VSL targets collateral assets with stable and predictable liquidation value and a clear path to exit in the event of a default
- Investments are secured via liens and equity pledges on the corporate entity or collateral which provide multiple avenues of structural protection
